Sustain Your Health / Sustain Your Life

# Advantages of Eco-Tunnels

- We use the 200micron, UV resistant plastic which is imported from Israel and can with stain the harshest sun rays. Plus we give you the option to cover your tunnel with the 40% black / white shade netting for added protection against animals, hot conditions, and hail and doubles the life span of your tunnel. – We do recommend you take this option.
- The strongest, thickest greenhouse plastic you get on the market
- Plastic has a 3 yr guarantee and a lifespan of about 10 yrs
- It is cut to size to fit over the entire tunnel, NO joins in the plastic
- The Structure is made from PVC – UV resistant – 50yr life span
- The Door Frame is made from treated wood / netting and closes tightly with a latch to lock
- No RUST – DURABLE & Long lasting
- 2 doors for ventilation
- The tunnels are anchored firmly to the ground and can withstand harsh weather conditions.
- DIY Kit – Easy to assemble
- Comes with a complete manual

# Benefits of Eco-Tunnels

- Protection of plants from bad weather & solar radiation
- Off-season nursery can be raised
- Crops are of very good quality and give good yield
- Use less water and save labour time
- Pests and diseases can be controlled easily
- Extend your growing season
- 

Eco-Tunnels are perfect for Hydroponics, The 9 pod systems are ideal for the professional and beginner grower. Each tunnel is wide enough to have hydroponic Systems running along each side of the tunnel.

# Sizes of Eco-Tunnels

## We do the standard DIY Sizes

3.5m **wide** x 2.2m **high**

### Length:

3m / 6m / 12m

- Each Tunnel comes with a Gift Pack of Heirloom Seeds.
- Heirloom seeds are precious! Some of these seeds date back hundreds of years and have developed their strength over long periods of time to withstand the vagaries of climate and resilience. The purity of heirloom seeds allows us to produce harvest that we know will be same as the parent plants. Heirloom seeds are the original seeds, untampered with by human hands and certainly not genetically modified, essential for our worldwide food security! # Feedback

I am happy to report that our tunnel has arrived after the idiotic truckers strike.

We spent the weekend assembling the structure , and are now well on our way to growing our own food !!

I have been in business for almost 40 years , and seldom have I come across a company that is so service driven. I live in the Gauteng area , and you guy's are on the Garden route and you still managed to render the service that you did.

In the modern day , service is something that is often spoken about but not very often implemented , so to have been on the receiving end of great service , at a distance to boot , has been a real pleasure. The only way to beat the large Corporate is through service.

One can only hope, that one day, the message about service will get through to more people , and make this a better country in which to live.

That said , the product quality is also exceptional. The only thing that worries me , is that I will wake and this will have been just a pleasant dream !!!

I shall keep you posted on our progress , and send you pics of before , during and after.

Thanks again , and may your business go from strength to strength - you deserve it

Best regards .

*Tony Campbell.*

I would like to thank you for the tunnel you supplied us with.

I was shocked at the length of time it took to have it put up, I have had tunnels in the past and never has it ever taken less than a day to be erected, and you managed to put it up, doors and all, in under 2 1/2 hours!

The latches work perfectly, keeping the doors well secured and sealing the tunnel. I would recommend you to anyone should they ask!

Although you said the plastic was not drip proof, I have noticed that it actually is, and that is a definite bonus for me.

Best regards and with great thanks

*Yvonne Maspero*
