# BENEFITS OF CANNABIS OIL

Cannabis oil is widely beneficial and is considered as one of the most effective oils for alleviation of certain conditions and illnesses. Cannabidiol, also known as CBD, impacts the brain without a high. Tetrahydrocannabinol, also known as THC, has pain relieving properties.

## Relieves Pain:

Cannabis oil reduces chronic pain, inflammation and occasionally in emergency pain relief. This is the reason why people who have been diagnosed with cancer turn to cannabis-related products, including cannabis oil, when they need relief from the pain of the chemotherapy or the disease itself.

- Relieves Multiples Sclerosis Pain
- Arthritis and Osteoporosis Pain
- Menstrual Pain
- Rheumatism
- Fibromyalgia

## Reduces frequent Epileptic Seizures:

The effects of cannabis oil, more specifically the cannabinoids such as THC, help to control seizures by attaching to the brain cells that are responsible for regulating relaxation and controlling excitability.

## Slows Alzheimer's disease:

The effects of cannabis oil may be able to slow the progression of Alzheimer's disease. THC, the active chemical in cannabis oil, slows the establishment of amyloid plaques by blocking the enzyme in the brain that makes them. Amyloid plaques are what kill brain cell and ultimately cause Alzheimer's disease.

## Helps fight Cancer:

- Cannabis Oil triggers the death of cancer cells through apoptosis
- Preventing the division of cancer cells
- Preventing new blood vessels from becoming tumours
- Reducing the risk of cancer cells spreading through the body and penetrating healthy neighbouring tissue.

## Insomnia

Helps with falling asleep while promoting deep sleep

## Improves Heart Health:

Protects from Cardiovascular disease and balances cardiac functions

## Anxiety Disorders:

- CBD may reduce anxiety behaviours in disorders such as:
- Post-Traumatic Stress disorder
- General anxiety disorder
- Panic disorder
- Obsessive Compulsive Disorder

## Skin Care:

- The powerful components of cannabis oil are used to protect the skin. The oil can be consumed both internally and applied externally to achieve this important side effect. It can stimulate the shedding of dead skin and faster re-growth of healthy, glowing skin. It is also known for preventing wrinkles, signs of aging, and protecting against eczema and psoriasis.
- Cannabis Oil soothes Acne as it lowers the production of sebum that leads to acne, partly because of its anti-inflammatory effect on the body

## Other Benefits:

Diabetes

Reduces Blood Pressure

Hypertension

Prevents Glaucoma

Supports the Immune System promoting overall health and wellness

Balances Intestinal Flora and Optimize Digestion

## Coriander Oil

R160.00

50 ML

DOSAGE: 4 – 8 drops twice daily

Rich in vital nutrients
