

Bicycle GPS Tracker

MODEL: GT505

Introduction:

Doubling as a working bike tail light, the low-key tracker is installed as part of the 'Splylamp' light.

Activated by pressing the on/off button for five seconds, the light flashes three times to confirm it is activated.

The Splylamp has a vibration sensor, which is armed when activated, detecting movement in the event of a bike thief stealing the bike. The device sends an SMS text message to the owners mobile to notify that the bike is moving, and then uploads its position to GPS Track This website every 20 seconds until the vibration has stopped. The website plots the course of the bike on a map, revealing the bike's location

Features:

- Quad Band GSM, Enable to Work Worldwide
- U-Blox GPS Chip, 50 Channels, Accuracy: 10m
- Arm the Tracker by Pressing on/off button for 3 seconds when parking
- Circular Geo-fencing, Sleep Mode Available
